```
A;Description: catalyzes the oxidation of inosine 5'-phosphate by NAD and one molecule C A;Pathway: purine nucleotide biosynthesis
C:Superfamily: IMP dehydrogenase; CBS homology; IMP dehydrogenase amino-terminal homolog
C:Keywords: GMP biosynthesis; NAD; oxidoreductase; purine nucleotide biosynthesis
F:28-94/Domain: IMP dehydrogenase amino-terminal homology <IDHN>
F:179-328/Domain: CBS homology <CBS>
F:229-472/Domain: IMP dehydrogenase catalytic homology <IDHC>
F:327/Active site: Cys #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           IMP dehydrogenase (EC 1.1.1.205) - Leishmania donovani
N;Alternate names: IMPDH; inosine 5'-monophosphate dehydrogenase
C;Species: Leishmania donovani
C;Date: 13:Nov-1998 #sequence_revision 13:Nov-1998 #text_change 16-Jul-1999
C;Accession: A38668
